Requirement

From pandas 0.19.2 you can now just [pass read\\_csv\(\) the url directly](#), although that will fail if it requires authentication

If you want to read the csv from a string, you can use [io.StringIO](#).

Execution

From pandas 0.19.2 you can now just pass the url directly.

Being obligated

A simpler approach is to pass the correct url of the *raw* data directly to `read_csv`, you **don't** have to pass a file like object, you can pass a url so you don't need requests at all
